

DKS Associates

TRANSPORTATION SOLUTIONS

DKS Associates is a national transportation planning and engineering firm that provides state-of-the-art consulting services for all modes of ground transportation. We are an employee-owned company.

Founded in 1979, DKS has become one of the largest specialized transportation engineering and planning firms in the United States. Our firm provides technically innovative and institutionally sensitive solutions appropriate to the needs of each client. Our staff successfully integrates transportation economics, consensus building and public policy into the transportation planning process.

DKS performs planning and design for all modes of travel, including automobiles, buses, light rail, rapid rail, commuter rail, commercial vehicles, and bicycles and other non-motorized transport. Our planners use cutting-edge techniques to develop travel forecasting models and related technical evaluations to prepare transit and multi-modal plans; and to conduct corridor, traffic calming and traffic impact studies. Our engineers design roadways, street improvements, traffic control and communication systems, traffic signals, transit centers, and other transportation facilities. We also assist our clients in construction administration, inspection and plan review.

DKS is a national leader in the planning and implementation of Intelligent Transportation Systems (ITS). Our staff develop ITS Early Deployment Plans; freeway and multimodal corridor management systems; and traveler information, public transit, and commercial vehicle systems. We keep abreast of ITS technological advances to provide our clients with state-of-the-art solutions to their transportation problems.

DKS professionals work with clients in the private sector and with public sector clients at local, regional, state and federal levels. The majority of our staff are registered professional civil engineers, traffic engineers, or certified planners. Nearly two-thirds of our technical staff hold advanced degrees.
