

MILLER ELECTRIC COMPANY

## Transportation Group

*WE'RE NOT YOUR TYPICAL ELECTRICAL CONTRACTOR*

As you travel down Florida's highways you will notice some changes to the lighting and traffic signalization systems. Miller Electric Company is proud to be a major part in implementing these changes. We have served the Florida Transportation and Communications Industries for a better part of our seventy five year history. With a broad base of technical expertise, skilled employees and experience, we have excelled in this field.

Miller Transportation Group has designed, installed and maintained a vast array of projects utilizing the latest technology, teamed with continuing education and training. Our experience ranges from planning and design to construction and maintenance of Intelligent Transportation Systems (ITS), traffic signaling, computerized traffic control systems and microwave communication systems.

Miller Electric Company started in the Intelligent Transportation Systems (ITS) field in 1996 with the installation of the first video cameras in Florida Department of Transportation District Two on the Buckman Bridge. Since then Miller Electric has completed numerous projects including Weigh-In-Motion Stations, Weigh-In Motion Facilities, Fiber Optic Communications, Closed Loop Systems, and the installation of all Pre-Pass Systems throughout the state.

We are at presently installing the ITS system on the Hathaway Bridge in Panama City, Florida. This system consists of Closed Circuit Television Cameras, Weather Stations, and Overhead Variable Message Signs along with a complete new control facility.

Since 1928, Miller Electric has been one of the most dynamic electrical contractors in the nation. While primarily serving the southeastern United States, the company also handles special projects both nationwide and abroad. A closely held corporation with an excellent financial base, the company continues to improve its market position. Projects include Transportation, commercial, industrial, governmental and healthcare. In addition to electrical contract work, Miller Electric takes great pride in its 24-hour, 7-day-a-week, service organization. From the largest project to the smallest service call comes the experience, pride and dedication that has made Miller Electric's reputation what it is today. Completing a job is not just bringing it in on time and under budget, but completing it with the Miller quality and customer satisfaction guarantee.

For the people at Miller Electric, quality is not simply a word, it is a level of excellence we seek continuously. From management staff to the men in the field, from administration to warehouse, everyone shares responsibility for the reputation of Miller Electric. Specialized training and education, a team management approach, and the latest technology all contribute to the total quality concept which assures Miller's success. No matter how difficult or complicated the task, Miller electric provides the skilled personnel and specialized equipment to get the job done.
